

SOL  **DECK**
Coming Soon: Luxury outdoor living

Add definition and transform your outdoor living space

Building on the proven success of our window, door and framing systems, we are now launching a brand new Smart Outdoor Living range.

The new SolDeck Aluminium Decking system is suitable for residential and commercial projects, both new build and refurbishment.

Developed to provide an elegant and durable solution for garden makeovers, balconies, terraces, patios, or to create a completely new outdoor living space, SolDeck provides the perfect solution.

The stylish, slip-resistant decking system is supplied in stock lengths which can be cut suit applications of any shape and size, with a palette of colours to choose from, together with accessories including complementary edge trims.

Fast and simple to install, the system can be secured to either timber or SolDeck aluminium joists using concealed fixings and will provide years of trouble-free service. The durable system requires virtually no maintenance; it will not warp, bend or rot and requires no treatments, staining or painting as traditional timber systems do.

Engineered with precision for fast and easy installation
